

Justin Jamssens

Belleville, MI | 734-818-9892 | jmjamssens@gmail.com

SUMMARY

Operations professional with 5+ years at General Motors coordinating large-scale projects across 10 plant sites, tracking 400+ PCs and 700+ network switches, and leading a nationwide cable migration of over 10,000 cables. Brings hands-on automotive manufacturing experience directly applicable to supply chain, production control, and material flow roles. Strong communicator who has worked alongside engineers, plant managers, vendors, and floor staff to keep operations running on schedule. Currently pursuing a Business degree at the University of Maine at Presque Isle.

SKILLS

- Operations: Project coordination, multi-site operations, asset and inventory tracking, process documentation, production continuity
- Coordination and Communication: Vendor management, cross-team communication, stakeholder reporting, training delivery
- Tools and Systems: ServiceNow, Macrium, Qualys, Cylance, BigFix, PowerShell, Bash, Windows, Linux

EDUCATION

Bachelor of Arts in Business Administration, Supply Chain Management Concentration

University of Maine at Presque Isle | In Progress

EXPERIENCE

Cybersecurity Engineer (Contractor) | General Motors, Romulus, MI | October 2019 to Present

Embedded in GM automotive manufacturing plants for 5+ years, working across multiple sites in a role that required constant coordination with operations, vendors, and plant staff to keep systems running without disrupting production.

Project and Multi-Site Coordination

- Led a nationwide cable migration project across most GM sites in the US, personally overseeing the relocation and reconnection of over 10,000 cables across 10 plant locations without interrupting production.
- Managed project schedules, tracked progress across all 10 sites, and communicated updates to plant managers and IT teams throughout each phase.
- Identified bottlenecks early and adjusted workflows to prevent delays, the same instinct that drives good production control.

Asset Tracking and Inventory Management

- Tracked and managed over 400 PCs and 700 network switches across the Romulus plant alone, keeping accurate records of deployment status, location, and condition for every asset.
- Managed backup schedules and system inventories using Macrium, which required the same discipline as monitoring stock levels: knowing what you have, where it is, and when it needs attention.
- Used ServiceNow to log and track work orders, incidents, and equipment status, a workflow very similar to ERP and MRP systems used in production control.

Vendor and Contractor Support

- Coordinated with machine vendors including Marposs, Reishauer, and Buderus to support software updates and equipment needs on the plant floor.
- Supported robot programming contractors on-site, managing their access to the plant network and troubleshooting connectivity to Cisco switches under my management.
- Served as the go-to contact between contractors and plant operations, making sure outside teams had what they needed to get their work done without disrupting production.

Reporting and Process Documentation

- Gathered and tracked operational data for security audits and compliance reporting, requiring the same attention to detail that production control and material flow roles depend on.
- Wrote and delivered training materials for plant staff covering new systems and processes, ranging from floor technicians to management.
